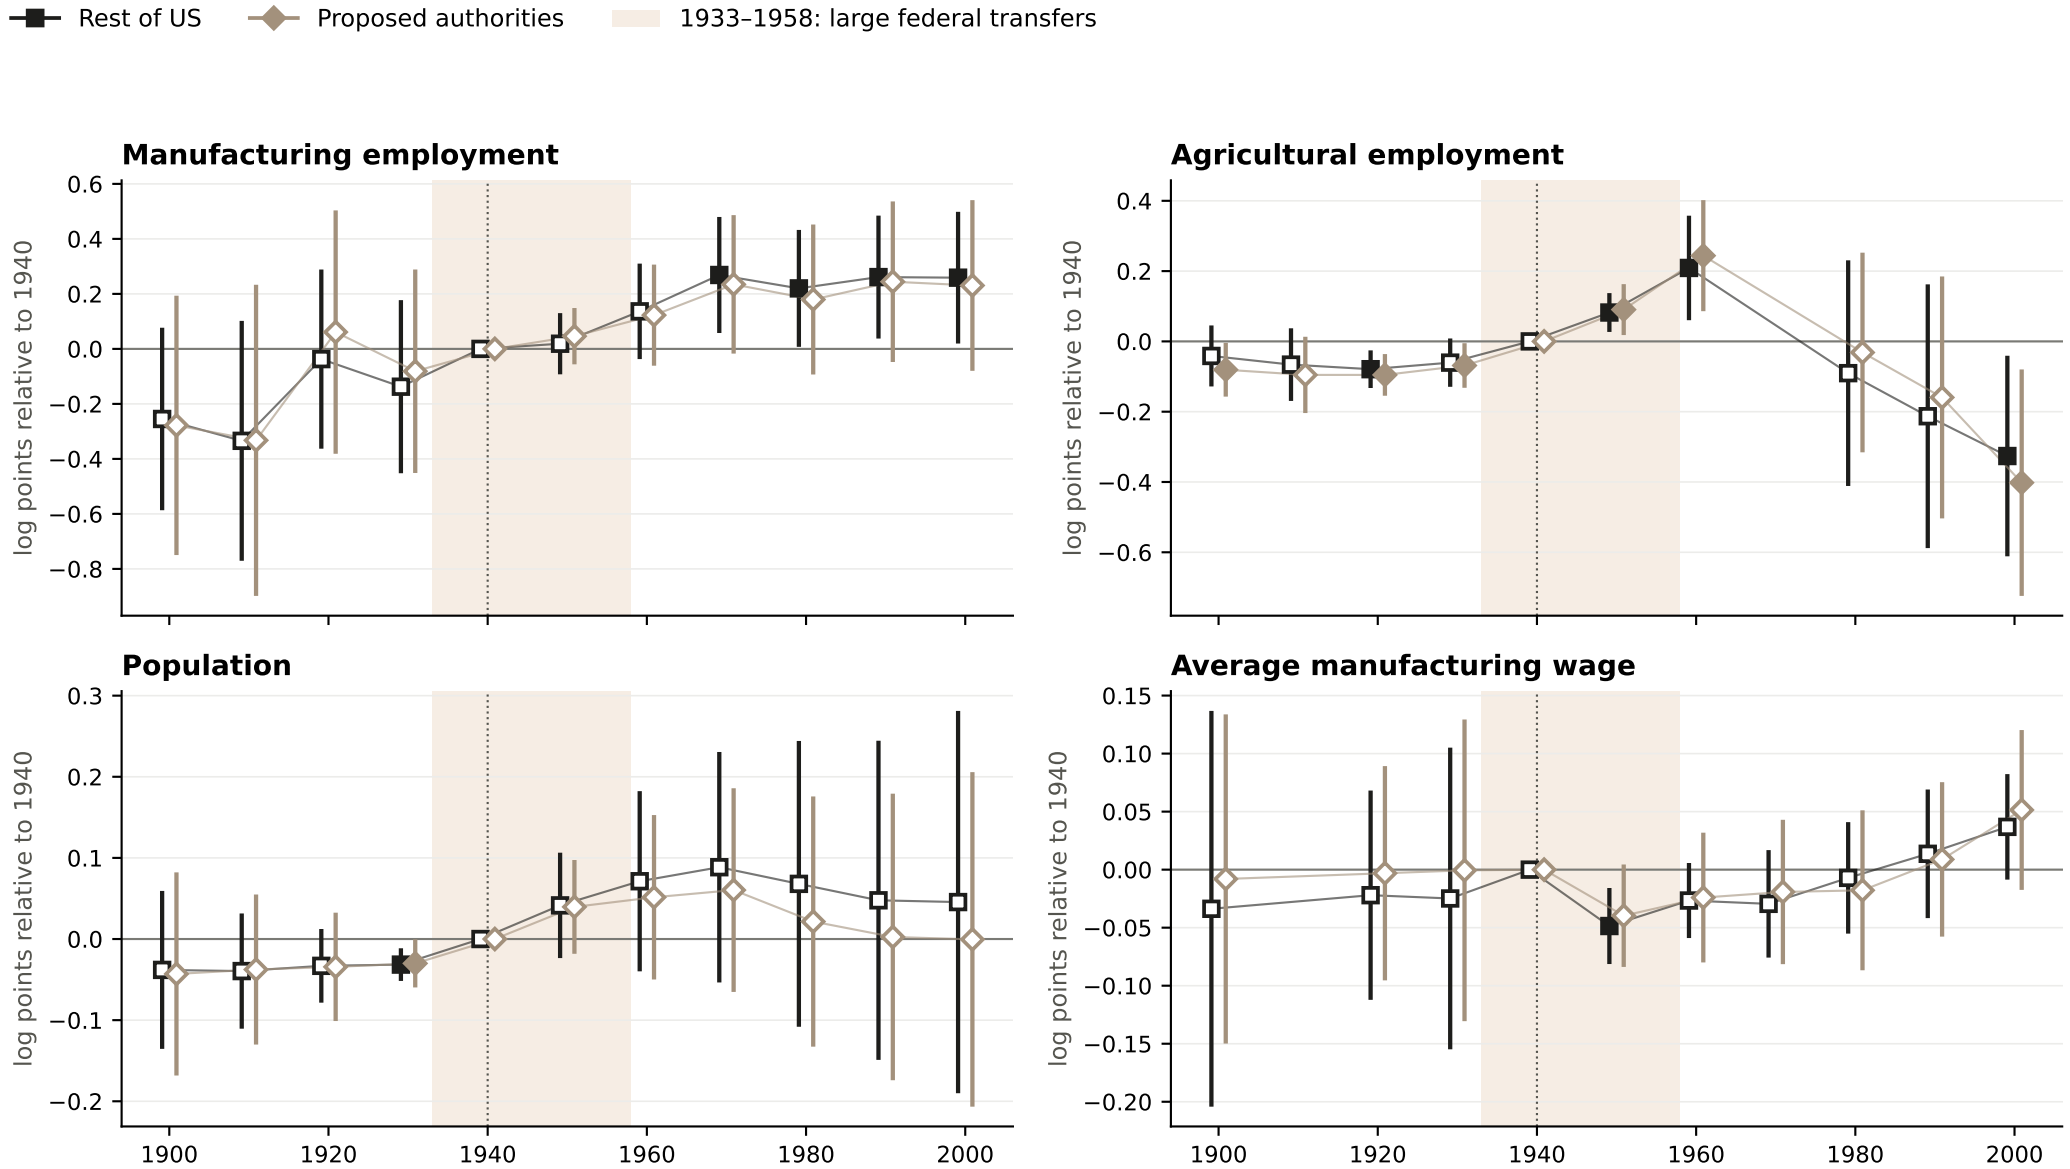
Effect of TVA by census year: change relative to 1940
(Oaxaca-Blinder estimate and 95% CI; filled = interval excludes 0)



Same counties in every year (balanced panel by outcome); controls and samples of Kline and Moretti (2014). Rest of US: S.E. clustered by state; proposed authorities: spatial HAC (200 miles).
Changes up to 1940 include treated years (1933-40); 1920 and 1930 coefficients are partly mechanical (1920/30 levels are controls).
